Art Unit: 2816

# Response to Amendment

This office action is in response to the amendment filed on 1/7/2002.

## **Drawings**

The drawing correction and the substitute sheets of drawings, filed on 1/7/2002 have been approved.

# Claim Objections

Claim 6 is objected to because of the following informalities:

Claim 6, line 2, change "phse" to --phase--.

Appropriate correction is required.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4, and 6-8 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

As to claims 1,3,4, 6, and 7, the recitation of "delaying is irrespective of the comparison during an initiation period" is not described in the specification. Such a newly added limitation creates unnecessary additional search and may raise doubt or uncertainty of the claimed invention. A full explanation is required.

Art Unit: 2816

Claims 2 and 8 are also rejected under 35 U.S.C. 112, first paragraph, because of their dependency on claims 1 and 7, respectively.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4, and 6-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claims 1,3,4, 6, and 7, the recitation of "delaying is irrespective of the comparison during an initiation period" renders the claims indefinite since it is unclear how is "an initiation period " defined, and also it is unclear how delaying being irrespective of the comparison during an initiation period is performed.

Clarification/Correction is required.

Claims 2 and 8 are also rejected under 35 U.S.C. 112, second paragraph, because of their dependency on claims 1 and 7, respectively.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 2816

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Lu (U.S. Patent No. 6,100,735).

With respect to claims 1-2, and 5, as best understood, Figures 1 and 7B-C of Lu show a delay time adjusting circuit and a respective method for adjusting a delay time of an input [ICLK] signal so that a phase of the input signal and a phase of an output signal [DCLK] match each other, based on a comparison between phases of the input signal and the output signal; the delay time adjusting circuit comprises a) detecting means [14] for detecting a phase difference between the phase of the input signal and the phase of the output signal, and b) delaying means [12,20] for delaying the phase of the output signal irrespective of the comparison during an initiation period.

With respect to claim 3, as best understood, Figures 1 and 7B-C of Lu show a respective adjusting method for adjusting a delay time of an input [ICLK] first periodic signal so that a phase of the input first periodic signal and a phase of an output second periodic signal match each other based on a comparison between phases of the input first periodic signal and the input second periodic signal; the method comprises a step of adjusting [18] the delay time so that when a phase of a predetermined rising edge of the output second periodic signal is behind a phase of a predetermined rising edge of the input first periodic signal, the predetermined rising edge of the output second periodic signal matches a rising edge of the input first periodic signal, and a phase of the rising edge is behind and nearest to the phase of the predetermined rising edge of the output second periodic signal, wherein the adjusting of the delay is irrespective of the comparison during an initiation period.

Art Unit: 2816

With respect to claims 4 and 6, Figures 1 and 7B-C of Lu show a delay adjusting circuit for adjusting a delay time of an input [ICLK] first periodic signal so that a phase of the input first periodic signal and a phase of an output [DCLK] second periodic period match each other based on a comparison between phases of the input first periodic signal and the input second periodic signal; the delay adjusting circuit comprises: a) judging means [14] for judging whether a phase of a predetermined rising edge of the output second periodic signal is behind a phase of a predetermined rising edge of the input first periodic signal, and b) delaying means [12, 20] for adjusting the delay time so that when the phase of the predetermined rising edge of the output second periodic signal is judged to be behind the phase of the predetermined rising edge of the input first periodic signal by the judging means, the predetermined rising edge of the output second periodic signal matches a rising edge of the input first periodic signal, and a phase of the rising edge is behind and nearest to the phase of the predetermined rising edge of the output second periodic signal, wherein the judging and delaying is irrespective of the comparison during an initiation period.

With respect to claim 7, as best understood, Figures 1 and 7B-C of Lu show a delay time adjusting circuit for adjusting a delay time of an input [ICLK] first periodic signal so that a phase of the input first periodic signal and a phase of an output [DCLK] second periodic signal match each other based on a comparison between phases of the input first periodic signal and the input second periodic signal; the delay time adjusting circuit comprises a) delaying means [12,20] for delaying the input first periodic signal so as to generate the output second periodic signal, b) a phase-detecting means [14] for

Art Unit: 2816

detecting whether a phase of a predetermined rising edge of the output second periodic signal is behind a phase of a first rising edge of the input first periodic signal, and c) adjusting means [18] for controlling the delaying means so that when the phase of the predetermined rising edge is judged to be behind the phase of the first rising edge by the detecting means, the delaying means delays the phase of the output second periodic signal until the phase of the determined rising edge and a phase of a second rising edge of the input first periodic signal match each other, and the second rising edge is one period behind the first rising edge, wherein the delaying, phase-detecting and adjusting is irrespective of the comparison during an initiation period.

With respect to claim 8, Figures 1 and 7B-C of Lu show that the adjusting means [18] controls the delaying means [12, 20] so that, after the phase of the predetermined rising edge and the phase of the second rising edge match each other, the phase of the predetermined rising edge and the phase of the second rising edge match each other all the time within a tolerable range.

#### Remarks and Conclusion

Applicant's arguments filed 1/7/2002 have been fully considered but they are not persuasive.

The Examiner acknowledges the arguments of the Applicant made in the second full paragraph of the amendment filed on 01/7/2002 concerning "a delay is provided irrespective of the initial comparison so as to prevent an occurrence of an underflow state". It is understood that in Lu's delay-locked loop that during an initial period, the comparison signal requires a period of time to reach the steady state, therefore the

Art Unit: 2816

delay adjustments does not start until after this initial period or in other words until the comparison signal is stabilized. Hence, the claimed limitations can not overcome the teaching of Lu.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

# Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Linh M. Nguyen whose telephone number is (703) 305-0414. The examiner can normally be reached on Alternate Monday and Tuesday to Friday from 5:30 to 3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan, can be reached on (703) 308-4876. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-0142.

Art Unit: 2816
